GSM WIRELESS INTERCOM  
with **NO RANGE LIMIT**

When your visitor presses the CALL button at your gate, the unit will dial your home phone number first and if no one answers the call, it will automatically ring a second number, which might be your mobile phone. This allows you to talk with the visitor and open the gate with the press of a button.

**With this system, there is always someone home.**

MODEL: GSM-18V3

# ACCESS CONTROL

## Wireless System

Talk with your visitors and open the gate via your home phone or mobile phone wirelessly

## Excellent for Business use

Talk with your clients even when your office is unattended.

## Access Control

That's not all, the unit also allows to open the gate or the door with any mobile phone with **NO COST OF A CALL.**

Just program in all the phone numbers of the family members and they all can use their mobile phone to open the gate free of charge.

## Solar System

The system has an option to be used on Solar Energy without the need of any power source at the gate. Excellent solution for rural applications.

## Cost Effective

Being a very competitive priced unit and allowing simplest installation and saving the cost of running wires to the gate, the system becomes the ultimate choice and cost effective unit available.

## No Range Limit

Superb solution for gates which are kilometers away from home.

## Keyless Entry

The end user can dial the unit and check if the gate is open or closed and lock the system from being used by unauthorized users.

## Security

With this system you are always at home for any visitor.
